

*Challenging organic syntheses inspired by nature-
from natural products chemistry to drug discovery*

COST Action CM1407

Final Meeting

La Laguna Gran Hotel, Tenerife (Spain)

13-14 December, 2018

Location: La Laguna, Tenerife (Spain), 13-14 December, 2018

Venue: La Laguna Gran Hotel

Deadline for abstract submission 15 October, 2018

Scientific Committee:

Bruno Botta - Action Chair (Italy)
Daniele Passarella - STSM Coordinator (Italy)
David Tejedor - IPNA - CSIC (Spain)
Deborah Quaglio - Sapienza University of Rome (Italy)
Fernando García-Tellado - IPNA - CSIC (Spain)
Francesca Ghirga - Istituto Italiano di Tecnologia (Italy)
Juan Ignacio Padrón - IPNA - CSIC (Spain)
Mattia Mori - MC member (Italy)
Michalis Christodoulou - Università degli Studi di Milano (Italy)
Víctor S. Martín - Universidad de La Laguna (Spain)
Tomás Martín - IPNA - CSIC (Spain)

Local Organizing Committee:

Juan Ignacio Padrón - IPNA - CSIC
David Tejedor - IPNA - CSIC
Fernando García-Tellado - IPNA - CSIC
Víctor S. Martín - Universidad de La Laguna
Tomás Martín - IPNA - CSIC
Romen Carrillo - IPNA - CSIC
Fernando Pinacho-Crisóstomo - Universidad de La Laguna
Ezequiel Quintana - IPNA - CSIC
Celina García - Universidad de La Laguna
Ignacio Brouard - IPNA - CSIC

Secretary:

Ioana Stupariu - Secretary COST Action CM1407

CM1407 ACTION SUMMARY

Natural products (NP) have had a major impact on chemistry, chemical biology and drug discovery and have been part of medical remedies since ancient times. Nowadays, NP represent a unique source of leads for medicinal chemistry and drugs derived from NP have found widespread use for the treatment of cancer, cardiovascular diseases, bacterial and fungal infections. The general aim of this COST Action is to advance the field and to maintain the high level of expertise in NP chemistry within Europe by combining synthetic chemistry, computational chemistry, chemical biology, and pharmacology to find new lead structures of pharmaceutical relevance. Since chemistry plays a key role in addressing the industrial requirements for preclinical candidates in terms of physicochemical properties of NP and their analogues, this Action further aims to promote the translation between fundamental academic research and industrial drug discovery by means of NP chemistry. COST is a unique means for European researchers, engineers and scholars to jointly develop their own ideas and new initiatives across all fields of science and technology through trans-European networking of nationally funded research activities.
